Pharmaceutical Leader Sanofi
Trailblazes New Vulnerability Strategy

150 000
workstations / servers

1 500
websites

3 400
applications

Each a potential entry point for attackers.

/ hackuity — sanofi

"Hackuity integrates with our ecosystem to help us focus on what's vulnerable – not on managing Excel sheets."

– Wilfried Laumond, Head of Risk Monitoring & Service @ Sanofi

The Context

Public health crises

Public skepticism

IP and R&D critical assets

An ever-expanding number of cyber risks

The Challenges

+ A worldwide perimeter

+ Limited automation to monitor and remediate assets

+ Dispersed teams

A manual process of unmanageable vulnerabilities

The Mission

01 Centralize vulnerabilities detected by siloed security products throughout the infrastructure

02 Prioritize critical vulnerabilities + automate remediation to replace Excel, conflicting vulnerabilities, and manual fixes

03 Ensure rapid response in case of emergency

How

did Sanofi, the #3 global leader in healthcare, reimagine proactive risk-based vulnerability management?

The Short Answer?

To calm the vulnerability storm, Sanofi chose Hackuity – a worldwide cybersecurity leader based in Europe and Asia.

What changed with Hackuity?

280%
reduction of at-risk assets

7%
of vulnerabilities deduplicated

100%
of vulnerabilities constantly centralized and harmonized

End-to-end automation
for 80% of VM operations

Cybersec + business
needs both met

For 20 years, VM has meant inventorying, assessing, and remediating. Except that 80% of cyberattacks use a vulnerability published half a decade ago. Translation: either cybersec professionals don't care (not true) or they can't keep up on their own (it's time we admit that). Fragmented teams, too many tools, and exploding vulnerabilities are a match made in heaven – for attackers.

Founded in 2018 by experts from leading cybersecurity service providers, Hackuity reinvents VM to protect organizations worldwide:

Hackuity's Exposure Management Platform

Manage risks, not Excel. Packing 50+ supported connectors, Hackuity gives you a single-pane of glass through an asset-centric view of your cyber exposure. Prioritize risks specific to your attack surface, detect critical vulnerabilities, and enable always-on remediation.

✳ — **RIP manual processing**
Automate 70% of vulnerability-related tasks to cut remediation time.

✳ — **Respect the bottom line**
No BS. More VM. Save your team's bandwidth and budget.

✳ — **Reduce the noise**
Eliminate Critical Vulnerabilities by x38 with True Risk Score. Remediate the real threats.

Hackuity is bringing *clarity* to cyber vulnerability chaos.
